# A Comparative Study of GPUVerify and GKLEE

#### Anmol Panda<sup>1</sup> Philipp Rümmer<sup>2</sup> Neena Goveas<sup>1</sup>

<sup>1</sup>Department of Computer Science and Information Systems BITS Pilani K K Birla Goa Campus, India

> <sup>2</sup>Department of Information Technology Uppsala University, Sweden

#### 4th International Conference on Parallel and Distributed Grid Computing, 2016 JUIT, Waknaghat, India

Background	Objectives and Scope	Experiments and Results	Analysis	Conclusion	Summary
		00			

# Outline

- 1 Background
  - Challeneges in GPU Computing
  - Verification tools: GPUVerify and GKLEE
- 2 Objectives and Scope
- 3 Experiments and Results
  - Benchmarks
  - Experimental Setup
  - Results

# 4 Analysis

- Differences in Bugs Reported
- Difference in Runtime

## 5 Conclusion

Anmol Panda, Philipp Rümmer, Neena Goveas

Background ○	Objectives and Scope	Experiments and Results 0 00	Analysis 0 00	Conclusion	
Challeneges in GF	PU Computing				

Background

#### CUDA, Opencl, OpenAMP

Background ○	Objectives and Scope	Experiments and Results 0 00	Analysis 0 00	Conclusion	
Challeneges in GF	PU Computing				

- CUDA, Opencl, OpenAMP
- Lack of backward compatibility
- Absence of dedicated cache memory
- Difficult to optimize performance
- Making efficient software requires significant time and resources

Background ○	Objectives and Scope	Experiments and Results 0 00	Analysis 0 00	Conclusion	
Challeneges in GP	PU Computing				

- CUDA, Opencl, OpenAMP
- Lack of backward compatibility
- Absence of dedicated cache memory
- Difficult to optimize performance
- Making efficient software requires significant time and resources
- Bugs like Data races and diverging barriers

Background ○ ●	Objectives and Scope	Experiments and Results 0 00	Analysis 0 00	Conclusion	
Verification tools:	GPUVerify and GKLEE

Background ○ ●	Objectives and Scope	Experiments and Results 0 00	Analysis 0 00	Conclusion	
Verification tools:	GPUVerify and GKLEE				

- Need for verification
- GPUVerify: Developed by Alastair Donaldson from Imperial College London and Shaz Qadeer from Microsoft as a portable verifier of Opencl and CUDA kernels

Anmol Panda, Philipp Rümmer, Neena Goveas

Background ○ ●	Objectives and Scope	Experiments and Results 0 0 00	Analysis 0 00	Conclusion	
Verification tools:	GPUVerify and GKLEE				

- Need for verification
- GPUVerify: Developed by Alastair Donaldson from Imperial College London and Shaz Qadeer from Microsoft as a portable verifier of Opencl and CUDA kernels
- GKLEE: Developed by the Gauss Research group as a concolic (concrete and symbolic) verifier-cum-analyzer of CUDA programs for GPUs

Background	Objectives and Scope	Experiments and Results	Analysis	Conclusion	Summary
		00			

# **Objectives and Scope**

- Objectives
  - Compare GPUVerify and GKLEE for factors like bugs reported, execution time and system portability
  - Understand their usability, learn-ability and and preferred usage

Anmol Panda, Philipp Rümmer, Neena Goveas

Background	Objectives and Scope	Experiments and Results	Analysis	Conclusion	Summary
		00			

# **Objectives and Scope**

- Objectives
  - Compare GPUVerify and GKLEE for factors like bugs reported, execution time and system portability
  - Understand their usability, learn-ability and and preferred usage
- Scope
  - Within the scope: Performance aspects of the tools
  - Beyond the scope: Theoretical aspects of these tools

Anmol Panda, Philipp Rümmer, Neena Goveas

Background 0 0	Objectives and Scope	Experiments and Results ● ○ ○○	Analysis 0 00	Conclusion	
Benchmarks					

# Experiments and Results

- Number of benchmarks: 26
- Number of OpenCl benchmarks: 6
- Number of CUDA becnhmarks: 20
- Source of benchmarks: Open source Github repositories and GKLEE test samples
- Type of benchmarks: Image processing, data mining, mathematical operations, etc.
- Test conducted: GPUVerify 6 Opencl, 14 CUDA, GKLEE - 16 CUDA

#### Experimental Setup

# Experiments and Results

Sr	Property	Type / Value
No		
1	CPU	Intel ®Core <sup>TM</sup> i7-3770
2	Clock Speed	3.40 GHz
3	Number of Cores	8
4	Graphics	Intel RIvyBridge Desktop
5	Operating System	Ubuntu 14.04 LTS
6	OS Type	64 bit
7	System Memory	8 GB
8	Disk Size	483.8 GB

#### Table: System Specifications

## Analysis

Anmol Panda, Philipp Rümmer, Neena Goveas

BITS Pilani K K Birla Goa Campus, Uppsala University

Background	Objectives and Scope	Experiments and Results	Analysis	Conclusion	Summary
		00			

- Scope of the software
- Portability, learn-ability and usability issues
- Execution time
- Recommended use

Anmol Panda, Philipp Rümmer, Neena Goveas

Background 0 0	Objectives and Scope	Experiments and Results 0 0 00	Analysis 0 00	Conclusion	Summary

- GPUVerify and GKLEE provide much needed and useful mechanisms to verify GPU software
- GPUVerify takes less time and is more portable
- GKLEE provides detailed results and reports performance pitfalls

#### Future work

- False positive and negatives
- Qualitative classification of benchmarks

Anmol Panda, Philipp Rümmer, Neena Goveas
